No one has offered anything like a 45 day at 1000 gpm or any day limit for dewatering. The dewatering will continue at the needed rate until the past buck leaves the pond. We do not even have a schedule or means to move the fret bucket yet. This s the issue I was discussing in the earlier email. This is not the goal. Managing the dewatering and storm water s the goal.

Can we talk before I have a call with Apex at 1300 hours?

All,

I just had a long conversation with DEQ about the project and here is some clarification about what they would like to see:

- <!--[if !supportLists]--><!--[endif]-->For the projection of the time needed to complete dewatering of Ash Pond D. They would like to have time frames and maximum projected flows for both removal of the surface water (45 days, 2000gpm) and for ash dewatering (Installation and dewatering 110days, up to 2000gpm or less).
- <!--[if !supportLists]--><!--[endif]-->They would like a description of the treatment that we are planning for both of the wastewater types above. This is what you are about to talk to APAEX about.
- <!--[if !supportLists]--><!--[endif]-->They would also like a description of the treatment that is currently in place to remove solids from the water that we are transferring to Pond D (my understanding from our November 6 meeting with APEX is that they were going to be providing us with that description). Could APEX pull together their various documents for the filtration systems too into a description?

Jeff Marcell – The only data that we have been able locate for Outfall 107 is some data that were collected and submitted with the 2003 application for reissuance. If you know of other samples that were collected please let me know.

We will need to have some additional discussions about the toe drain.

Please feel free to call me on my cell phone (804.592.7825) should you have any questions about this.

Thanks,

Ken

**Subject:** FW: Request for Information - Possum Point

All,

Below is a request from DEQ for additional information related to the pond closure at Possum. We are also being asked to provide some of the same information for Bremono.

Amelia is working to collect and evaluate any data that have been generated for Outfall 107. I will need your help to gather the rest of the information. I have a call in to Susan to get some clarification on what she means by the time needed to complete dewatering of Ash Pond D. I'm trying to find out if she means removal of all of the surface water and ash dewatering water or if she is considering these to be one single "dewatering" event.

Thanks,

Ken

**Subject:** Request for Information - Possum Point

Ken, Jeff –

Thank you again for your assistance with the site visit on Tuesday. We appreciate your taking the time.

As we discussed on site, there are a few additional items that we are requesting.....

- <!--[if !supportLists]--><!--[endif]-->Any analytical data collected for S107 (proposed 010);
- <!--[if !supportLists]--><!--[endif]-->The volume of water currently stored in Ash Pond D;
- <!--[if !supportLists]--><!--[endif]-->A projection as to the time needed to complete dewatering of Ash Pond D;
- <!--[if !supportLists]--><!--[endif]-->A confirmation of the maximum flow from the treatment system; and

- <!--[if !supportLists]--><!--[endif]-->A description of the treatment system.

If you could, please provide this information by December 2, 2015. If you have any questions please don't hesitate to contact me.

Hope you have a Happy Thanksgiving.

Thanks,  
Susan
